

WALKWAY PROJECTS

The walkway projects listed in **Tables 10-12** and on the following maps will fill the highest need sidewalk gaps on major streets and in school zones. The overall cost for these priority projects is estimated to be \$547 million - approximately \$540 million for new walkways and \$7 million for walkway upgrades - which is about 20% of the much larger \$2.6 billion estimated cost to complete all of the missing walkways on inventoried streets. These projects were further prioritized into three tiers to identify near, mid, and long term funding priorities. A score was assigned to each project based on several metrics. The sources, weighting factors, and metrics are included in **Appendix B** along with the results for the pedestrian demand index, which was considered as part of the overall prioritization score. The situation of each roadway within a Title VI/EJ area was also considered. The results of this analysis are included in **Appendix C**.

Shown in the table are each project’s unique project ID, (which is also shown on the maps) the extents of the project, and the project’s total score. As all recommended projects are walkways it is expected that the responsible agency for all projects will be the City and County of Honolulu Department of Transportation Services or the Department of Design and Construction and that the funding sources identified in **Table 14** under the sidewalk column would apply. The proposed walkways are for City and County of Honolulu streets and does not cover State, federal, or private streets.

**IMPROVEMENTS IN THE WORKS: MAKING PROGRESS**

Walkway improvements were already under development or are being actively considered as part of planning projects at 50 of the proposed walkways. Many of these locations will receive improvements within the next five years. These locations are shown in bold in **Tables 12-14**.
